REVISION NOTICE

September 11, 2020 Rev1:

• Applicability has been updated to include 2021 model year ES 250 vehicles.

Any previous printed versions of this bulletin should be discarded.

Introduction

A battery in a stored vehicle is subject to conditions that can reduce its performance and service life. These conditions include storage period, temperature, parasitic drain, and battery load. Because of these factors, battery inspection and maintenance are required in order to ensure proper operation and optimal battery life.

As a matter of policy, Lexus does not provide battery warranty coverage for discharged and/or failed batteries due to lack of maintenance. It is the dealer's responsibility to maintain the specified State-Of-Charge (SOC) of the vehicle's battery while in stock and ensure proper SOC at delivery.

To eliminate customer service concerns due to an undercharged battery during the first few weeks of ownership, ALL dealers should check battery SOC and recharge, if necessary, no more than 48 hours before delivery to the customer.

Required Tools & Equipment

SPECIAL SERVICE TOOLS (SST)	PARTNUMBER	QTY
Digital Battery System Analyzer and Printer*	<u>00002-V8150-KIT</u>	1
GR8 Battery Diagnostic Station*	00002-MCGR8	1

*Essential SST.

NOTE

Additional SSTs may be ordered by calling 1-800-933-8335.

REQUIRED EQUIPMENT	SUPPLIER	PART NUMBER	QTY
Techstream ADVi*		TSADVUNIT	
Techstream 2.0		TS2UNIT	1
Techstream Lite	ADE	TSLITEPDLR01	
Techstream Lite (Green Cable)		TSLP2DLR01	

*Essential SST.

NOTE

- Only ONE of the Techstream units listed above is required.
- Software version 15.20.016 or later is required.
- Additional Techstream units may be ordered by calling Approved Dealer Equipment (ADE) at 1-800-368-6787.

Battery Inspection Procedure

ALL vehicles MUST be inspected according to the procedures listed below using the digital battery system analyzer no more than 48 hours BEFORE delivery to the customer.

IMPORTANT NOTICE FOR HYBRID VEHICLES

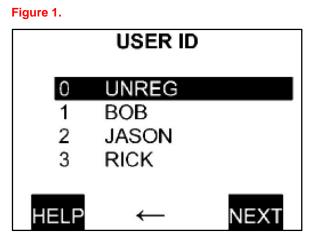

In hybrid vehicles, the digital battery system analyzer is to be used ONLY on the AUXILIARY (12V) battery.

1. Connect the test clamps to the battery. (If the analyzer does NOT power up automatically, press the Power button.)

Battery Inspection Procedure (continued)

2. Select the correct user ID (if applicable) and press the Next soft key.

Battery Inspection Results

Once the test completes, proceed with one of the procedures below according to the battery condition results.

• Battery Condition: "GOOD BATTERY"

Return the battery to service.

• Battery Condition: "GOOD-RECHARGE"

Fully charge the battery using the GR8 battery diagnostic station and return it to service.

Battery Condition: "CHARGE & RETEST"

Fully charge the battery using the GR8 battery diagnostic station and retest.

NOTE

Failure to fully charge the battery BEFORE retesting may cause false readings.

• Battery Condition: "REPLACE BATTERY"

Replace the battery.

NOTE

A "Replace Battery" result may also mean a poor connection between the battery cables and the battery. Retest the battery using the out-of-vehicle test BEFORE replacing it.

Battery Condition: "BAD CELL-REPLACE"

Replace the battery. This decision indicates a bad cell within the battery.

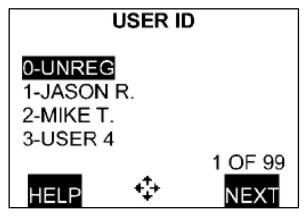

CAUTION

- If "FROZEN BATTERY" displays as the test result, allow the battery to reach a temperature of 40°F (4°C) BEFORE retesting.
- NEVER CHARGE A FROZEN BATTERY. GASES MAY FORM, CRACKING THE CASE AND CAUSING BATTERY ACID TO LEAK.

Battery Charging Procedure

If the battery requires charging, follow the procedure below using the GR8 battery diagnostic station and printer.

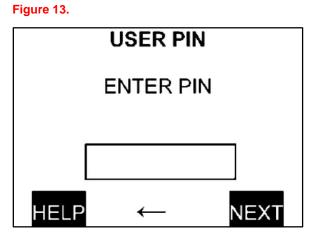

- 1. Connect the charger cables to the positive (+) and negative (-) battery terminals.
- 2. Plug the charger into the 110V outlet and turn the switch to the ON position.
- 3. Select the appropriate user ID (if applicable) and press the Next soft key.
- Figure 12.

4. Enter the user PIN (if applicable) and press the Next soft key.

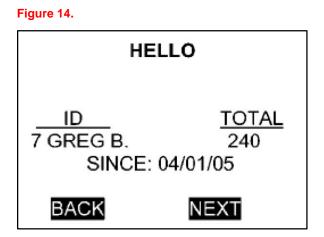

NOTE

For details on defining user ID or PIN, refer to the GR8 Instruction Manual.

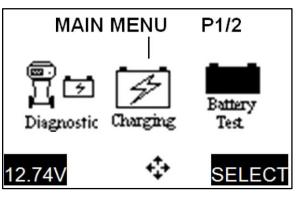

Battery Charging Procedure (continued)

5. Press the Next soft key when the Hello screen appears to proceed to the Main Menu.

6. Select Diagnostic from the Main Menu screen and press the Select soft key.

Battery Charging Results

Once the test completes, continue with one of the procedures below according to the battery condition results.

Battery Condition: "GOOD BATTERY"

Return the battery to service.

Battery Condition: "REPLACE BATTERY" •

Replace the battery. Print the Results screen for the warranty code by pressing the Print soft key.

NOTE

A "Replace Battery" result may also mean a poor connection between the battery cables and the battery. Retest the battery using the out-of-vehicle test BEFORE replacing it.

Battery Condition: "BAD CELL–REPLACE"

Replace the battery. This decision indicates a bad cell within the battery. Print the Results screen for the warranty code by pressing the Print soft key.

Battery Replacement Procedure

If a vehicle battery needs to be replaced for a warrantable condition, complete a Warranty Battery Label and affix it to the failed battery for proper warranty parts and claim processing. Include the Vehicle Identification Number (VIN) and warranty code on the Warranty Battery Label. Figure 23.

Recommended Battery Maintenance

In addition to this NEW pre-delivery battery test, periodic battery maintenance is still required for stored vehicles. If your dealership is in an area subject to extreme temperatures (hot or cold), periodic maintenance may need to be performed more frequently.

Refer to long-term storage guidelines.

To reduce parasitic battery drain on vehicles that are placed in storage for 1 week or more, the negative (–) battery cable should ALWAYS be disconnected to reduce battery discharge. When the negative (–) battery cable is reconnected, check and reset electrical components, such as the clock, radio, etc., and re-initialize ALL applicable systems/functions.

Refer to the applicable model and model year Repair Manual for specific details.
