M2 dash says "park brake not set" Jul 22, 2020 7:03 PM

I have a 2019 M2 with hydraulic brakes, when I put the park brake on it says on the dash that the "park brake not set" and when you open the door the horn will go off until you shup the door again, anyone come across this issue?

Do you have a VIN? It sounds like you may have a switch issue with the park brake. Plus the horn going off is a parameter that is set alerting you that the park brake is not set.

I've got one in the shop doing that same thing. VIN KT5666 hydro brakes with a dd5. But its also showing low air for the park brakes. Unplugged both switches and jumped both of them still didn't work. Jumped them right at the CHM got the warnings to go away. for the longest time I couldn't find the 12 pin connector in G66-07521-000. Its under the cab drivers side footwell. found that when they installed it they broke the connector lock and the shore power wiring. That connector was unplugged causing all of those issues.

This picture is after I already took everything out, but I put it back above the chassis module just to show kind of where it was
