DET D20M8 ASM DELETED Oct 6, 2020 6:00 AM

Tablet lost connection halfway through the DET D20M8 firmware update erasing the ACM. Any suggestions on how to reinstall the last know working settings?

Did you down load the parameters and send them to the server before programming ? if so just program with latest server configuration . if not try and program to oem . also make sure the vin shows up in the acm , if not do a vin sync then program .
