Western Star wipers Oct 8, 2020 1:47 PM

I have a 2019 WS 5700XE. When I use the wipers for about an hour, the wipers cease to respond to the switch to turn off. If I turn the truck off the wipers still run. The battery shut off switch will stop them, but when I turn the batteries back on the wipers start again. The only confirmed way to stop them, is to pull the fuse. My local dealer added an extra ground wire but that did not stop the issue. Of course they can not replicate the fault. Has anyone found a fix for this issue?

Sounds like the wiper motor is not parking. Without being able to duplicate it makes it hard to diagnose in the shop. If there is a good ground going to the motor, sounds like you might have an issue inside the motor itself. Trying to prove to warranty would be difficult though.

Talbert

I tried both links and was denied access. Said I was unauthorized to view them.

Thx thou

Talbert

I was looking for a solution myself. Shop rates at \$155/ hour and they have spent multiple hours chasing it and can't find the issue.
