**How do i diagnose a pre trip light check not working in a 2013 C2? I have changed the switch twice.** Oct 7, 2020 7:43 PM

Light ck is not working and I have changed the switch twice.

We will need to start with the last 6 digits of the bus VIN, Lee.

Do you have access to DTNA Connect and/or Diagnostic Link version 8.XX? You can monitor switch activity with Diagnostic link in addition to the module outputs.

The CHEC tool in DTNA Connect can be used to see how the switches are configured.

lee if service link is available you can use that or you will need diagnostic link i do not know what Detroit connect is ,or it sounds like this needs a trip to your local dealer, that's what we are there for.

One thing you can do, switch it with another working smart switch. If it works now, there is a issue with the smart switch wiring.
