Air Conditioning Blowing Warm Air

20MY Range Rover Evoque

Customer Voice:

- A customer may report that the HVAC system is not blowing cool air.

Technical Description:

- The air conditioning system may be low on refrigerant due to a slow refrigerant leak within the system.

Status:

- Engineering is investigating reports of refrigerant leaks in the system.
- Should a customer report a concern of lack of cooling and the cause is determined to be due to a refrigerant leak, please submit an EPQR with pictures of point of the leak in the system.
