Noise From Dynamic Suspension

17 - 20MY Range Rover

Customer Voice:

- A customer may report a hum / groan type noise in the cabin when coming from under the vehicle or a knocking noise from front suspension driving over bumps.

Technical Description:

- Noises emanating from the Dynamic Response system actuator bar (front or rear).

Status:

- Engineering are investigating noise concerns relating to the Dynamic Response system actuator bar assemblies.
- To support this investigation please submit an EPQR for any vehicle exhibiting a concern. Please include sound files or video of any noise concern, pictures of any fluid leak concern and detailed descriptions of the customers concern and when it occurs.
