

PJ TRAILERS

DEALER BULLETIN

We have been notified of some isolated incidents of unintended movement of the dump bed of dump trailers during the unloading process from transport shipments.

- **Products Affected:** All dump models
- **When:** During unload from a transport shipment utilizing an overhead lift or crane chained to the stake pockets or D-Rings of the dump bed.
- **Best Practice:** It is recommended that while unloading dumps from a transport shipment that you chain the dump bed to the dump frame or utilize an unloading position from under the frame.

We are engaged with the appropriate vendors to determine the root cause and a corrective path forward. A subsequent dealer announcement will be made when it is appropriate to resume standard unloading procedures when employing overhead equipment.

Thank you,
Kevin Ashmore
