P4 NEW CASCADIA AUX HVAC BLOWER TURN ON Sep 30, 2020 1:09 PM

Hi guys,

Just look at a new Cascadia here LC8339, with a issue with the aux hvac blower and the reading light. When driver get on the road, the aux hvac blower turn on by himself to the max position even if the control is off.

The reading light also turn on alone.

I check the wire is good and I reflash the rear hvac control module and ssam

This log file only shows the front blower off and rear on 800 rpm. Was the front on full blast, shut off on its own then the rear came on full blast but this is what was recorded or is this just the wrong log file?

P4 NEW CASCADIA AUX HVAC BLOWER TURN ON

Did the flashing fix your issue? I have one where they say the aux heater comes on by itself and will not shut off even with both panels turned off. No mention of the light though I'll have to ask that.
