2018 m2 pndb f2 125 amp fuse blown Dec 29, 2020 11:14 PM

unit came in with the complaint of the wipers not working. another tech replaced the wiper switch and the connector then the wiper motor. truck was given to me. the icu was not powering up. no power at the icu on pin d14. led me to pdm all the fuses show 12vbc but drop to 5 vdc using the load pro. went to the pndb found the f2 125 am fuse blown. wondering if its a bad pndb or I need to keep looking . not sure what circuits f2 feeds

In BOM 285 look for the PDM schematic. It should start with G06-. The description is something like WRG-POWER DISTRIBUTION,M2. Bringing it up in ez-wiring you will be able to see the PNDM from the f2 to the PDM and how it is distributed inside of the PDM.

Because the 125a is so much larger than any individual fuse in the PDM, I would be inclined to look for rubbing in the red cable 14E, between the VPDM and the PDM.

Those 2 cables go from pndb, up, behind and roll under the pndb mount then to the pdm

2018 m2 pndb f2 125 amp fuse blown

Re: 2018 m2 pndb f2 125 amp fuse blown Dec 31, 2020 4:36 PM

DON'T FORGET TO CHECK THE PNDB OUTPUT STUDS. I HAVE SEEN MUTLIPLI STUDES THAT JUST SPIN IN THE MODULE THAT APPEAR TO HAVE GOOD CONNECTION UNTIL YOU PUT A SOCKET ON THEM. WEIRD PART IS THAT SOMETIMES THE SPINNING STUD WILL CAUSE THE FUSE TO BLOW AND SOMETIMES IT WON'T.
