

# WLL1 Workshop campaign - Re-programming DME control unit

Version 1

## Overview

Due to a software error in the DME control unit, the engine on the affected vehicles may be subject to rough running while driving at engine speeds near the idle range.

As a result, fault memory entries relating to implausible camshaft adjustment will be entered in the fault memory.

To prevent this, the DME control unit must be re-programmed using a modified data record.

Please arrange for this measure to be carried out on the affected vehicles before handing the vehicles over to customers.

Model type	Macan (95B)
------------	-------------

Model year	2019 - 2021
------------	-------------

Number	421
--------	-----

---

## Required software

PIWIS Tester 3 test software version	39.850.000 (or higher)
--------------------------------------	------------------------

---
