

WLN4 Workshop campaign - Replacing wheel bearing on left- hand side of rear axle

Version 1

WLN4 Workshop campaign - Replacing wheel bearing on left-hand side of rear axle

Overview

The threaded joints for the wheel bearing on the left-hand side of the rear axle were tightened to too high a tightening torque on the affected vehicle.

This results in overloading of the bolts.

For this reason, the wheel bearing and the associated bolts on the left-hand side of the rear axle must be replaced.

Please arrange for this measure to be carried out on the affected vehicle as soon as feasible.
