Product Change Notice - Improved motor for PSX1 and PSX2 Power Stabilizing System

Dear Valued Customer:

Please be advised LCI has made an improvement to the motor for the PSX1 and PSX 2 Power Stabilizing Systems. The motors have been redesigned to an IP65 rated motor, reducing the opportunity for dust and water intrusion.

There is no change in fit, form or function with the improvement. The system comes from LCI with the motor installed on the stabilizer, so there is no change in installation for the OEM customer. The only change is for service on **PSX1 only** when switching out a current motor on a current system with a new motor. The hole in the motor bracket on a current system must be bored out at the bottom (Fig. 2) to accommodate the larger casting around the o-ring/shaft.

There is no change in price for the new motor and no change in part number. The change is expected to begin fourth quarter 2020.

Fig.1 PSX1

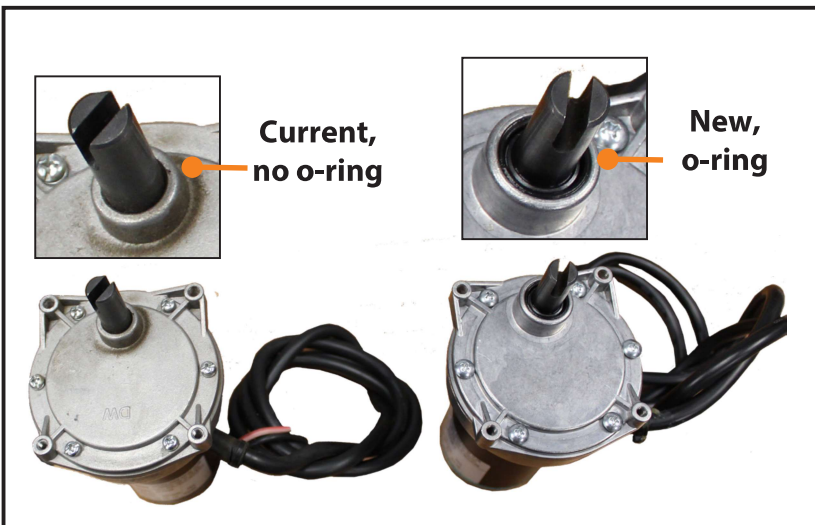

Fig.2 PSX1

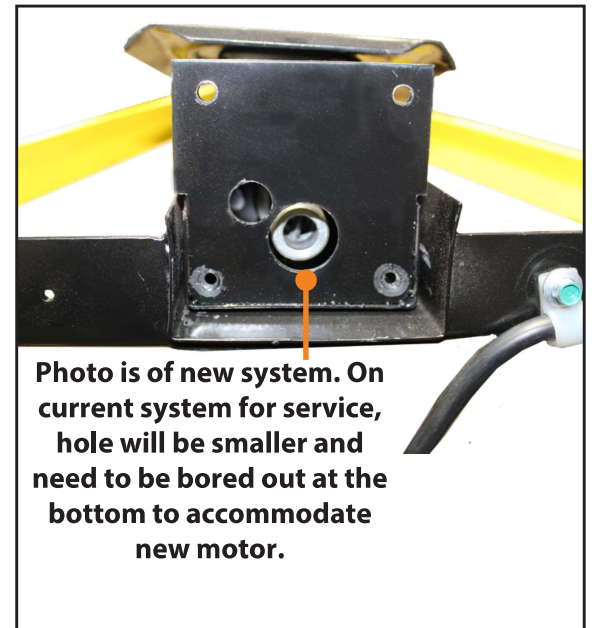

Fig.3 PSX2 - New

Note: There is no visible difference with the new PSX2 motor. No modification is needed to change an old motor for new in the field.

If you have any questions, please feel free to call me directly or your LCI representative. We value and appreciate your business and partnership.

Sincerely,

Mason Ogle

Frequently Asked Questions:

1. **Will a new part number be required?** No, there is no part number change.
2. **Does the price change for the item?** No, there is no price change.
3. **Is the new part wholly interchangeable with the previous version of the part?** For PSX1, the new motor cannot be installed on a current system without modification to the mounting bracket (Fig. 2). For PSX2, the motors are interchangeable.
4. **Does the customer need to replace inventory?** No, the change will be made on a running basis, starting first quarter 2020.
