Product Change Notice - No side or bottom rivets on 07 series baggage doors

Dear Valued Customer:

Please be advised, LCI intends to remove the side and bottom rivets (Fig. 1A) from 07 series baggage door frames.

The rivets were originally installed to hold the door core and frame together during the build process as the glue was drying. It was determined that the door spacer blocks (Fig. 3A) used to support the inner frame during the build process serve the same purpose as the side and bottom rivets. The spacer blocks remain in place during the OEM install as well. Please note, rivets will remain in place at the top of the frame to keep the overall frame secure to the core. Only the side and bottom rivets are being removed.

There is no change in fit, function or installation of the baggage doors with the rivet removal. There is no part number change and no price change. The change will be made on a running basis, starting mid-to late January, 2021.
