

Bulletin No.: PIT5779D

Published date: N/A

Preliminary Information

PIT5779D 110 Volt Power Outlets Inoperative With DTC B1A78

Models

Brand:	Model:	Model Years:	VIN:		Engine:	Transmissions:
			from	to		
Cadillac	Escalade Models	2021	All	All	All	All
Chevrolet	Suburban	2021	All	All	All	All
Chevrolet	Tahoe	2021	All	All	All	All
GMC	Yukon Models	2021	All	All	All	All

Involved Region or Country	North America
Additional Options (RPO)	K14 - 110 volt power outlets
Condition	Some customers may comment that the 110 volt power outlets are inoperative and cannot be reset after connecting an electrical device which overloads the system. The 110 volt power outlets will be inoperative and the green light on the power inverter button will flash, indicating the system has detected an overload. When checking for DTC's a B1A78 will be set in the BCM.
Cause	The 110 volt power outlets should reset once the device that caused the overload has been disconnected, but due to a BCM calibration issue the system will not reset.

Correction:

Do NOT replace the T1 AC and DC Power Control Module for this condition.

Engineering is currently working on updated calibrations to correct this condition. In the meantime, disconnect anything plugged into the 110/120 volt power outlets and use GDS2 to clear the BCM DTC's. This will allow the power outlets to operate again. This PI will be updated when new BCM calibrations are released, which will allow the system to reset on its own.

Warranty Information

For vehicles repaired under the Bumper-to-Bumper coverage (Canada Base Warranty coverage), use the appropriate labor operation. Reference the Applicable Warranties section of Investigate Vehicle History (IVH) for coverage information.
