

BRIDGESTONE TIRE RECALL

Dealership Action Required

DECEMBER 2020

Bridgestone Americas Tire Operations, LLC ("BATO") has decided that certain Firestone Destination LE3 and Bridgestone Ecopia H/L 422 Plus tires fail to conform with S6 of Federal Motor Vehicle Safety Standard No. 139. BATO has initiated a voluntary safety recall of these tires. These tires were sold in the replacement market in the United States.

The specific tires subject to the recall are listed below:

- Firestone Destination LE3 in tire size 255/60R19 manufactured between June 14, 2020 - July 18, 2020, and marked with press identification number E07L on the sidewall
- Bridgestone Ecopia H/L 422 Plus in tire size P255/60R19 manufactured between July 12, 2020 - August 8, 2020, and marked with press identification number E07L on the sidewall

Reason for the Recall

The subject tires may not comply with the performance requirements prescribed under Federal Motor Vehicle Safety Standard No. 139. The tires may have been manufactured with a small pinhole in the upper sidewall of the DOT serial intended outboard side of the tire. Affected tires with a pinhole penetrating the tire inner liner may slowly leak air. If the slow air loss is undetected or ignored, the continued loss of air may increase the risk of a vehicle crash or personal injury.

Actions Required

If is a violation of federal law for a dealer to sell, lease, reuse, or resell a recalled tire. Any dealer receiving this communication MUST click [HERE](#) for additional information regarding tire identification, other required actions and a description of remedy.

Follow all instructions provided by BATO.
