

Tractor Reflective Devices (WST172)

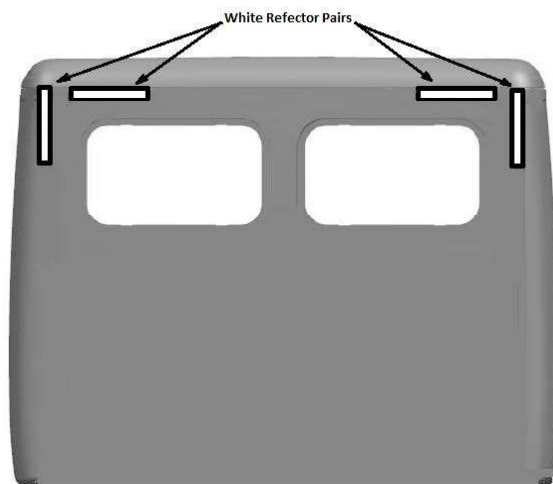

January 24, 2020

Effective: Chassis Starts on March 2, 2020

Our supplier communicated intent to stop production for the plastic reflex reflector (24-00816-000 CONSPICUITY STRIP) often used in two pairs to create the L-shaped white reflectors at the upper corners of the aft-facing surfaces of the cab/sleeper on tractors.

Effective with chassis starts noted, white retroreflective tape will replace all instances of the plastic reflector; the retroreflective tape will be used to create the two L-shaped white reflectors required by 49 CFR Part 571.108 (FMVSS 108) for tractors.

There is no Truck Sales Order impact for Western Star models.
