Subject: Supplementary arms for chassis/bodywork repair jig kit

Please note that the jig arms listed below (kit part number 079683401) will be direct shipped to all Authorized Ferrari body shops to supplement the **F173 JIG KIT** already in your possession:

Part No.	Description
no. 1 code A7083400 22R	Rear engine unit mounting – used in the area between the engine strut casting and the engine suspension support. This is used to find the exact position if the engine strut casting is replaced without the engine unit. The body chassis repair manual describes the procedure for replacement of the engine strut casting on the subframe without the engine unit. Arms A708340022R and A708340022L must therefore be used.
no. 1 code A7083400 22L	
no. 1 code A7083400 56R	Lower subframe mounting – used in the area between the engine strut casting and the rear sill casting. This is used to replace the engine subframe components when the subframe is put into the jig separately from the main chassis. The procedures for replacement of each component described in the body chassis repair manual consider the subframe in the jig to be separate from the main chassis. Arms A708340056R and A708340056L must therefore be used.
no. 1 code A7083400 56L	

Thank you for your co-operation
