Subject: Equipment for diagnosing eCall ECU

Please note that the aforementioned models and subsequent models will be equipped with a specific ECU for managing the **eCall (Emergency Call)** service in other markets. This feature is not used in the USA/USA light market; however, the equipment is required for diagnosing the CAN3 network of the SF90 Stradale.

The cable indicated in the following table is required for diagnosing this component. This cable will be automatically shipped to all Authorized Ferrari Dealers and become part of the minimum requirements (and therefore be considered **mandatory** equipment) for meeting the quality standards defined for the aftersales process of the **Ferrari Authorized Network**.

From **January 2021**, this cable will be included in the minimum list of specific workshop tools and equipment.

Part No.	Description	Quantity to be sent	Image	Entering orders for Spare Parts Department
95993572	VCI OBD eCall cable	1		Automatic Shipment
95993583	C3 Phase 1 acquisition cable (for SF90 Stradale, use together with cable VCI OBD eCall, Part No. 95993572)	1		Automatic Shipment

Ferrari North America

First, connect one end of the VCI OBD eCall cable (A) to the VCI, and then connect the other end to the OBD diagnostic port of the vehicle – Fig.1.

Thank you for your co-operation.
