On some of the T19 cabs, the windshield is fogging up when the air conditioner is running on a hot day. This is limiting the visibility of the driver requiring the condensation to be removed from the windshield with a cloth or paper towel.

An investigation by E-ONE and the air conditioner manufacturer found that a manufacturing variation in the blend door for the air conditioning ducts has caused improper sealing, allowing cool air to be directed onto the windshield.

To rectify this situation, SGM, the air conditioning manufacturer, has developed a kit to repair this issue.
