Western Star No Start Jan 14, 2021 4:06 PM

2021 Western Star 4900 MM0803 4600kms Unit start great when cold. Intermittent start when unit is hot. We have checked all battery-starter connections some connections a little loose but not the issue. Checked all connectors to modules all looks good. Did find some water intrusion in 21 pin connector at MCM. Repaired connector still same issue. Tested for power at starter signal wire no power with key in off position. With key in start position supplies voltage to starter for split second then drops out.

What are your ampnet test results? Also see workshop manual section 15.05.400

Agree with Scott, you will need to run ampnet tests. DO you have codes for starter circuit?
