Zonar Door Signal Jan 20, 2021 6:13 PM

On Thomas Saf t Liner C2 Vin# [4UZABRFB9MCMP2242](#) a new delivered unit to end user. They state that there is no door signal showing up on their zonar. They have a handful of buses and 2 out of the 5 are not working, options ordered for these units are identical. If anyone has experienced this before and may be able to lend some information it would much appreciated.

Thank You,

Sam Corona

Anytime I had to deal with a Zonar issue. I had to call Zonar directly @ 877-843-3847. Hopefully this helps.

I will get out to my customer next week sometime, I directed them to deal with Zonar direct. They had no help and were told they needed to figure the problem out themselves. I will call them while I am out next week and hope to get to the bottom of their issue. Thanks Talbert Simonian

You may want to have FCCC check the parameters in Virtual Tech to make sure it is set up for proper operation of the Zonar. I did have that issue also. VT needs to be setup for it.
