This is a 2019 SD122 but with a 18 speed transmission. MD6621. It may help with some information you are looking for. But you may still end up making a ticket with DTTS. To get the full information you may need. I know there are some parameters involved.

if you want that information to put a factory pto switch and wiring in a truck that does not have it the best thing is to put a ticket in with modification and pay the fee they will give you every single part needed to do the job and all of the bill of materials, and all of the programming.
