

## STAR ONLINE PUBLICATION

**Jeep** 

Case Number: S2118000001

Release Date: 2/09/2021

**Symptom/Vehicle Issue:** Malfunction Indicator Lamp (MIL) Illumination. Diagnostic Trouble Code (DTC) P0471 – Exhaust Pressure Sensor 1 Performance, Set.

**Discussion:** A small number of customers may experience a MIL illumination. Upon further investigation, a technician may find DTC P0471 set in the Powertrain Control Module (PCM).

In addition to P0471, you may also have one or more of the following DTCs set:

- P1451 Diesel Particulate Filter System Performance
- P2463 Diesel Particulate Filter Restriction
- P242F Diesel Particulate Filter Restriction, Ash Accumulation
- P0506 Idle Control System, RPM Lower Than Expected

DTC P0471 may be caused by back pressure in the exhaust due to plugging up of the Aftertreatment system. If you are diagnosing a vehicle with P0471 set, please inspect for, and repair, any possible restrictions in the exhaust system that may be leading to this DTC to set.

Do not replace the Exhaust Manifold Pressure (EMP) sensor for this DTC if the exhaust system is found to be restricted. The P0471 setting will not lead to the exhaust system becoming restricted. Please be sure to inspect for, and address, any conditions that have led to the exhaust restriction (e.g. restricted air intake and/or EGR systems, fuel system concerns causing over fueling, etc.), and repair those before installing any new exhaust system components.

This document does not authorize warranty repairs. This communication documents a record of past experiences. STAR Online does not provide any conclusions about what is wrong with the vehicle. Rather, it captures all previous cases known that appear to be similar or related to the vehicle symptom / condition. You are the expert, and you are responsible for deciding on the appropriate course of action.
