

Ferrari North America

Technical Information

Date: March 2021
Bulletin #: 2744
Campaign #:
Supersedes:
Section: 8

Models: **SF90 STRADALE**
Subject: Map Activation procedure

Please note that for the aforementioned models, it is necessary to activate the license of the navigation maps for the satellite navigation system to work correctly. The instructions for this procedure are given below. If you have a new vehicle, please perform this procedure right before the PDI road test.

- IMPORTANT -

This procedure must be performed outdoors to ensure a strong and stable GPS signal.

The procedure used depends on the software version of the **DEIS** diagnostic tester in your possession. Note that as of March 8, 2021 the 6.0.0.0 software version is available on all DEIS testers. Please follow the correct procedure for your tester, as illustrated below:

- **DEIS version 5.4.0.3 or 5.4.0.4**
Contact the **Help Desk Ferrari** (via **ROL** or at the email address **technicalsupport_FNA@ferrari.com**) and request an “**Easysequence**” for the activation to take place. This will show up as an activity once it is loaded. Once the operation is complete, turn the vehicle to **KEY-OFF** state and wait at least **1 minute** before turning back on.

- **DEIS Version Alpha 6.0.0.0**

The navigation map license may be activated directly using the cycle “**Update Maps PDI**” for the **NIT ECU**.

This cycle will also remove the “Developer Mode” warning on the instrument cluster.

Thank you for your co-operation.
