ALLISON CHECK TRANSMISSION LIGHT - FILTER LIFE MONITOR

AFFECTED VEHICLES

- 2018 – 2021MY Isuzu FTR

This bulletin supersedes bulletin IB19-K-001. This bulletin is being revised to update affected model years. Please discard previous bulletin IB19-K-001.

INFORMATION

The CHECK TRANS light may illuminate in the affected vehicles without any apparent transmission concerns. The Transmission Control Module (TCM) is programmed by Allison to predict the need for transmission maintenance relating to the Oil Life Monitor, Filter Life Monitor, and Transmission Health Monitor. In order to protect the transmission assembly, the CHECK TRANS light will illuminate when service intervals exceed Allison's recommendations.

Note: The most common diagnostic trouble code associated with the illumination of the CHECK TRANS light is DTC P088B-Transmission Filter Deterioration.

If the CHECK TRANS light is going on without any apparent transmission concerns, please refer the customer to their closest Allison authorized repair location. To assist the customer in locating the closest Allison authorized repair location, please go to (or recommend the customer go to) www.allisontransmission.com/sales-service-locator.

This condition is maintenance-related as recommended in the Allison Transmissions Operator's Manual and is not covered under Isuzu's New Vehicle Warranty.
