Product Change Notice - New entry door automated punch machine

Dear Valued Customer:

Lippert has added a new automated punch operation for entry door frames that punches the frame holes simultaneously.

The new automated punch process will help with consistency of hole placement and installation of the thresholds.

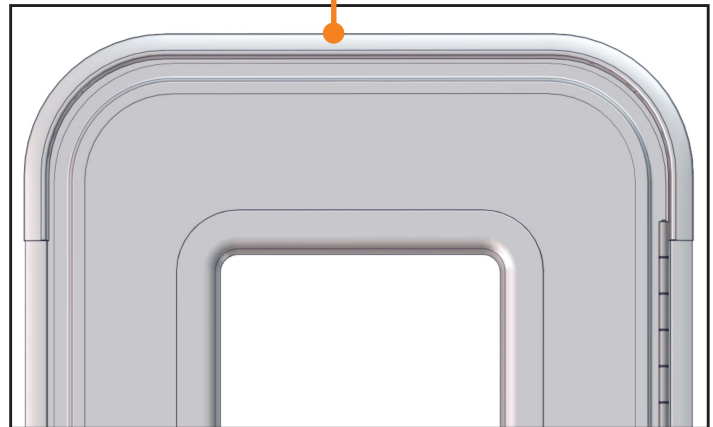

Per some customer requests, the new machine will add a punch to both sides of the radius. The radius screw locations are optional. If an OEM customer does not want to use the new screw locations, the drip cap will cover the radius and the new punches once installed.

The new automated punch machine is expected to go on line this week and some customers will begin seeing the change immediately after.

**New radius punch
(for optional screw
installation)**

Drip cap covers radius

If you have any questions, please feel free to call me directly or your LCI representative. We value and appreciate your business and partnership.

Sincerely,

Scott McKinnon
