✓ We have had a number of these come through our shop. A local truck buyer gets them from California truck auctions. Brings them to Kansas to sell. The DPF's are installed on older trucks to meet California emissions. We remove them and the dealer sells them to local farmers.

We started installing these and then stopped pretty much right after starting. We installed two dpf cleaning stations are our shop and never used them lol. All because of California emissions for older trucks.

Its not just California most of our municipal trucks that are pre emission have these in N.J., we don't sell it or service it.
