

Wiring the Sofa Module to the Control Panel

Follow additional steps at the bottom of the instructions first, if the power sofa has already failed to operate.

- 1) Access the load center.

- 2) Unplug the sofa wires on the spade connectors labeled SOFA RET. and SOFA EXT.

- 3) Plug the smaller orange and yellow wires from the sofa module into the spade connectors. Orange to SOFA RET. and yellow to SOFA EXT.

- 4) Plug wires going to sofa into the two output wires on the sofa module labeled EXT and RET on the board.

- 5) Access the back of the load center and connect the red power lead to the power stud as shown.

- 6) Connect the black ground lead to the grounding bar that the load center's ground wire goes to.

- 7) Secure the sofa module to the rear bench or floor.

Additional Steps

- A) Remove the wiring from the failed load center, making sure to take note of where all the wires go.
B) Remove the load center.
C) Install a new load center, making sure the wires are hooked up as they were originally.
