MY20-21 Challenger, Anti-Theft Faults – Historic

**MSD Post Content**

We have identified on model year (MY) 2020 and 2021 Challengers an Anti-Theft fault populates as the bike powers up and the fault goes historic prior to the Ride Command unit booting up. This fault will not be seen by the operator and does not generate a warning light, or security light. Technicians will see the faults displayed in Digital Wrench and on service reports. Unless the fault is in the current status or you are having a concern related to security/FOB functions the historic faults can be dismissed. This is a known concern with the startup/boot functions of these models and has no affect on bike operations.
