ags2 transmission not going into gear. display says sm and x

have a 2008 freightliner m2 WITH MBE900 and mercedes ags2 transmission. removed mcm and reinstalled and transmission works fine when keyed on and will do calibration but once started displays sm and switches to x has codes for power supply.. if truck started before transmission powers up truck runs and drives great and has no codes. cleaned power connections and replaced all transmission fuses. problem only appears if keyed on and not started before transmission powers on.

Chad Thomas is the guy at Daimler with AGS issues. I've attached some electrical troubleshooting I was sent a while ago. If memory serves me right, Servicelink needs to be used when looking at fault codes but don't take me up on that.

Just realized it doesn't have all the information needed in the attachment. There is AGS troubleshooting in the M2 workshop manual 26.03.301

Jon is 100% correct, Chad Thomas is the AGS man, 503-745-4988, or cell 503-810-7782.

[@Bryce_Kosak](#) email me at Rcadell@transchicago.com I got some stuff I can email you

[@Jon_Cecil](#) we have some info in the google folder under transmissions.
