MSD Thread Subject

Excessive parasitic draw, customers battery is dead after a few days of non use.

MSD Post Content

On tech line we sometimes get reports of abnormal parasitic load on the battery when a vehicle is powered down. Techs look everywher and find nothing abnormal.. If you see something like this please make sure the customer has not left a charging adaptor or really anything plugged into an accessory port on the bikes harness (see photo). The item shown would pull an Indian Challengers battery down in just a few days . Hope this helps - Bob
