

Model: Aprilia RS 660 and Tuono 660

Subject: Instrument panel calibration

Dear Dealer / Service Centre,

We hereby inform you that, after updating the P.A.D.S. diagnostic tool to the latest release available, a software update is available relating to the calibration of the instrument panel of the aforementioned model(s).

The operation referred to above is to be included in the normal maintenance activities to be carried out at the same time as the pre-delivery, during the activities scheduled for services, or on the first convenient passage in the Workshop for vehicles in circulation.

The main content of the available update is:

- Unification of the instrument panel management with other models in the Aprilia 600 range.

Detailed summary table

Model	Version	Internal Code	New map
Aprilia RS 660 (cruscotto/instrument panel)	Tutte/all		60-UD-83423.104
Aprilia Tuono 660 (cruscotto/instrument panel)	Tutte/all		60-UD-83423.104

Once programming is complete, in some cases the instrument panel could turn on again correctly while the P.A.D.S. diagnostic tool remains blocked and does not give positive reprogramming feedback.

In this case, simply turn the key to the OFF position and disconnect the P.A.D.S. diagnostic tool.

Then reconnect the P.A.D.S. diagnostic tool and check that the map has been updated in the ECU data of the instrument panel (see table); if this is not the case, repeat the programming.

Note:

If the calibration update fails, enter a technical help desk ticket.

Please contact the Technical Help Desk of our Technical Support Service for any queries or assistance.

Best regards,
