

New Release

We are pleased to announce the availability of our latest safety system, STAGE 2 LIGHTS, designed to support school bus drivers' with passenger loading and unloading care. The STAGE 2 LIGHTS Safety System provides drivers with the ability to communicate the safety of their loading / unloading passengers by controlling front bumper-mounted red and green indicator lamps. The traffic lamps, which help inform passengers that it is safe to cross the street, are controlled by a momentary switch located in the driver's switch panel. Corresponding pilot lamps also located in the driver's switch panel illuminate to indicate the bumper lamps' status to the driver. Please visit our TBB Trello page or the link below to watch a short video on this new safety system.

STAGE 2 LIGHTS are available on Minotour, Transit and C2 products and can be ordered at this time. Approval of change requests to add this safety system to existing vehicle orders will be subject to material lead times.

Features and Benefits

- Allows drivers to remotely signal to loading and unloading passengers
- Simple operation
- Shielded green lamp to prevent motorist confusion
