

All Thomas Built Bus vehicles manufactured in 2021 are required to be compliant to EPA Rule 40 CFR 1037.115. To document our compliance to this rule, effective **March 15, 2021** we are modifying the configurator to further identify Saf-T-Liner C2 vehicles that **have AC installations completed after delivery of the vehicle** from the factory but before delivery to the customer. Dealer installed or third party installed AC Systems completed on any TBB vehicle prior to the initial delivery of that vehicle to the customer are subject to GHG requirements and should be documented with TBB for compliance.

- In Order Management, when applicable, additional prompts will require you to select the AC system that will be installed by the dealer or by a third party installer authorized by the dealer (see pg. 2 of this announcement for example)
- The available list of options were generated through the engineering review of Air Conditioning System information provided by dealers and third party installers since our initial request in May, 2020
 - The added sales code represents the calculated leakage rate value for the unique configuration of the specified AC system
 - The available list of sales codes reflect documented systems that were found to be compliant to the new AC leakage requirements
- If an AC system you intend to install or have installed by a third party prior to delivery of the vehicle to the customer is not in this list of options, this indicates that additional documentation is required
 - Please contact the appropriate TBB product manager for details on how to submit required AC System documentation. This is a pre-requisite to the creation of new sales codes for your selections

Thomas Built Bus has asked that any dealer **who alters regulated emissions systems on Thomas Built Bus vehicles** prior to delivery to the customer provide a **signed Delegated Assembly Agreement** concerning the new EPA rule. The same applies to **dealers who authorize third party installers** to make changes to regulated systems.

Signed Delegated Assembly Agreements are not required from:

- Dealers who do not alter and do not authorize third parties to alter regulated systems
- Dealers who certify vehicles that have emissions systems altered prior to delivery to the customer

All other dealers are asked to provide the signed Delegated Assembly Agreement.

Please see the next page for an example of the configurator changes.

If you have any questions regarding these requirements please contact your product manager.
