

Next Generation Radios

What is it?

Pana-Pacific and Aptiv have restyled the DEA7XX radio models to provide an updated, differentiating look from the DEA5XX models. The new update will include a mute in reverse feature. When the truck is in reverse gear, the radio will mute automatically.

Why is it important?

These radios will continue to increase driver safety and accident prevention by muting during lane departure events, collision mitigation events and reverse operation. They also provide the next generation of infotainment options including digital audio and voice activation. CD player usage continues to decline as more operators use music apps or preloaded music on their phones so CD players will no longer be offered.

Image shown represents 746-135

Features:

- Digital audio capability
