

Bendix AutoVue

Safety

What is it?

AutoVue® Lane Departure Warning System by Bendix CVS detects when a vehicle drifts across a lane marking. When this occurs and the turn signal is not activated, the unit automatically emits a distinctive “rumble strip” or other warning, alerting the driver to make a correction. AutoVue works both day and night, and in most weather conditions where visibility is limited. The camera is updating from 3G to 5G and will deliver a higher resolution in image quality.

Why is it important?

Bendix AutoVue will continue to increase driver safety and accident prevention by promoting and reinforcing safe driving habits. The AutoVue system combines advanced hardware and proprietary image recognition software packaged in a camera and ECU. Data generated by AutoVue is gathered and reported in SafetyDirect by Bendix CVS. This provides the ability to develop targeted training programs to address real issues occurring on the road

Lens

All Freightliner models built past 6/7/21
73B-004 will be replaced by 73B-032
73B-007 will continue to be used
