Groan, Graunch or Judder Type Noise From Front Brakes

21MY RR Evoque, Discovery Sport, E-
PACE

Customer Voice:

- A customer may report that there is a groan, graunch or judder type noise when braking at low speeds..

Technical Description:

- This may be caused by brake pad material that has not evenly transferred onto the brake disc.

Status:

- SSM 75449 (Land Rover) and SSM 75450 (Jaguar) has been published to address this concern by providing repair guidance to clean the brake disc surfaces of pad material and prepare the disc and pad surfaces using 150 grit emery cloth.
- The SSM also provides a very specific brake bed-in procedure that is very important to follow to ensure a successful repair.
