Technical Background

Water leak testing.

Service

For any complaint of a water leaks, certain guidelines for water testing apply. All testing should be done with a garden hose or sprinkler set up (see below) and sprayed from the top down to simulate rainfall. High pressure wands should not be used, and it is not recommended to spray water upward or at unusual angles to the seals.

Below is an example of a simple sprinkler setup that can be built from materials obtained from most home improvement stores and hooked to a shop garden hose.
