

Detroit Connect Over the Air Issue Update

Communication Type: News

Date: 9/13/2021

This is an update for the previously communicated Over the Air functionality issue on CTP1s. We are currently testing a solution for the issue that is affecting these CTP1 telematics devices. While testing is not complete initial results are promising. The solution will require a software update which is currently planned for October/November.

Please note we will be sending a customer communication soon and additional updates as they are available. The link to the initial communication can be found below:
