Technical Service Bulletin

Condition

Customer states:

That the mobile device sometimes cannot be charged wirelessly. One of the following three situations is described:

- The phone gets very hot while charging and charging is cancelled and/or the phone goes into thermal protection mode.
- The phone is not charged and the following message is shown on the MMI: "The device cannot be charged as there is another object in the charging cradle."
- The phone does not start charging after it has been placed in the charging cradle.

The mobile device supports wireless charging or the customer uses a charging cover that enables wireless charging.

Technical Background

Technical limitations of the wireless charging standard.

Production Solution

Not applicable.

Service

The wireless charging feature can be affected by multiple external factors.

Please check whether the concern can still be reproduced under normal conditions.

To do so, please check the following items:

- Ensure that there are no objects other than the mobile phone in the charging cradle.
- If the phone is in a case or has a back cover, please check if the phone charges when put in the cradle without a case or cover.
- The position of the phone has a significant effect on the charging characteristics. Please ensure that the phone is centered in the charging cradle when performing the tests.

Background: The charging cradle uses three integrated charging coils, only one of which is actively used at any one time. With smaller devices, more energy is lost and more heat is produced if the device is significantly misaligned from the center position.

- The device may become very hot during wireless charging, especially if the phone's battery is low when placed on the charging pad. Therefore, check whether the concern can still be reproduced when the battery level is above 80%.

Technical Service Bulletin

- Intensive app use during wireless charging can cause the device to become very hot. Please check if the concern can still be reproduced when all apps are closed and stopped, including CarPlay or AndroidAuto.

Note:

If intensive use is required, we recommend using a USB connection instead.

- It can take up to 60 seconds for charging to start.
- Please also check if the charger works when a different phone is used.

If the concerns persist, continue the repair process using Guided Fault Finding.

Warranty

This TSB is informational only and not applicable to any Audi Warranty.

Additional Information

All part and service references provided in this TSB (2064681) are subject to change and/or removal. Always check with your Parts Department and/or ETKA for the latest information and parts bulletins. Please check the Repair Manual for fasteners, bolts, nuts, and screws that require replacement during the repair.
