### Complaint

Message in instrument cluster "Engine Oil Level - Reduce Oil Level"

### Cause

Under analysis

### Remedy

Call up workshop menu and calculate and document oil flow quantity under following conditions:

- Engine at operating temperature (oil temperature ~90°C)
- Engine speed 2000 to 2400 rpm

Note:

If it is too difficult to hold the RPM while stationary, then drive the vehicle at a constant speed on a flat road as part of an analysis drive and hold the RPMs at the prescribed range via manual gear selection then read off/photograph the oil level.

Create a PTSS case, include the calculated values and escalate it.

Also attach the results of an initial quick test to the PTSS case
