

Volvo Chassis 2008 And Up LED Headlight Conversion Programming Procedure

> Internal Content

The ability to perform the LED Headlights conversion and the required programming update to the Light Control Module (LCM) MID216 starts with the Volvo chassis 2008 model year. To determine if the conversion can be performed you will need to have access to the vehicle to confirm the LCM software level which in turn will allow you to know if the conversion can be performed previous to committing this sale to the customer. Within PTT, you will need to perform a Vehicle Information Test to confirm the MSW part number in the LCM (MID216) is either 21501276 or 21965197. If PTT does not reflect one of these software part numbers, program the MID216 and it will update to either 21501276 or 21965197. Providing one of these software part numbers is contained in the current programming, perform accessory kit 85141183. This will update the parameters for the new LED Headlights. After the accessory kit has been performed, program the MID216 once again to accept the programming.
