

Volvo VHD Models - Vehicle Will Not Start, PTO Active Message Displayed In Cluster, PTO Light On When PTO Switch Is Turned Off

Certain vehicles may experience a no-start condition: a message is displayed on the Driver Information Display (DID) that the PTO is active and the PTO light is illuminated while the PTO switch is turned off.

This condition may be caused by body builder harnesses 3 and 4 being unintentionally connected together. See the picture below.

- Disconnect the two harnesses and verify that the no-start condition has cleared.
- Submit an eService case advising that this condition was located.
