XENTRY TIPS

FIN_Zulassung.JPG 	World manufacture code (digit 1-3 of the vehicle identification number)
--	---

Cause

To rule out any mix-up of the charging cable with other model series, the charging cable for model series 453 has a label on it that bears the valid model designations.

The printed-on model designations contain not only the model series and design type, but also the world manufacture code.

With the restructuring of Mercedes-Benz AG, the world manufacture code (digit 1-3 of the vehicle identification number) changed from WME to W1A.

This change does not have any technical effect on the charging architecture.

Remedy

If the model designation (digit 4 - 9 of vehicle identification number) on the charging cable label matches the vehicle identification number, the charging cable may be used for the corresponding vehicle.
