

Cascadia Sleeper Dome Light Shortages

Communication Type: Product News

Date: 12/9/2021

Due to supply chain constraints, we are currently experiencing a shortage of rear dome lights in Cascadia sleeper models for builds starting on or after 11/29/21. Daycabs are not affected. There is no shortage on the front dome light. All Cascadia day cab and sleeper models will have the forward dome light located above the windshield installed. The curbside sleeper ambient light is not affected, so all sleepers will be delivered with at least one functioning sleeper light.

Lights supplied will vary, so the affected trucks will ship without the lights, and when the supply is replenished, the lights will be shipped for installation via the ship short process. The plant will put a notice in the owner's manual packet for affected units. Supply is estimated to resume normal delivery in first quarter of 2022.

Affected part numbers:

- A22-73821-000 (1)
- A22-73822-000 (2)
- A22-73823-000 (3)
