

Subject: SERVICE PARTS CHANGED FOR IMMOBILIZER UNIT	Bulletin No: 09-001/16
	Last Issued: 01/04/2016

APPLICABLE MODEL(S)/VINS

2000-2003 MPV
2001-2005 MX-5

DESCRIPTION

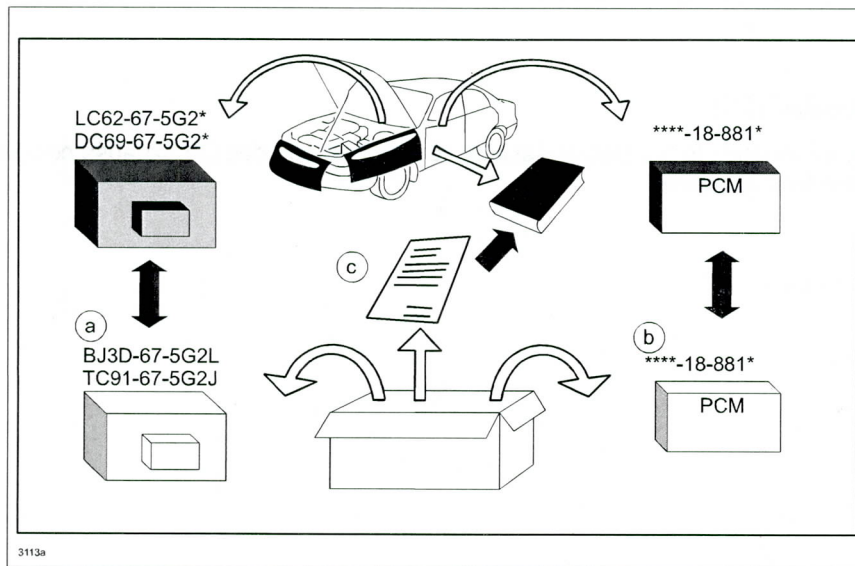

If the immobilizer unit LC62-67-5G2* or DC69-67-5G2* needs to be replaced with a new one, these parts are no longer available. New alternative service parts kits are now available, including alternative immobilizer unit BJ3D-67-5G2L or TC91-67-5G2J. They will require the following additional procedure to be performed in order to work on the vehicle.

- Powertrain Control Module (PCM) has to be replaced with one in the kit.
- The parts kit has to be ordered for the specific VIN due to the necessary PCM replacement.
- Some vehicles need a wire connection change at the vehicle side connector for the immobilizer unit.

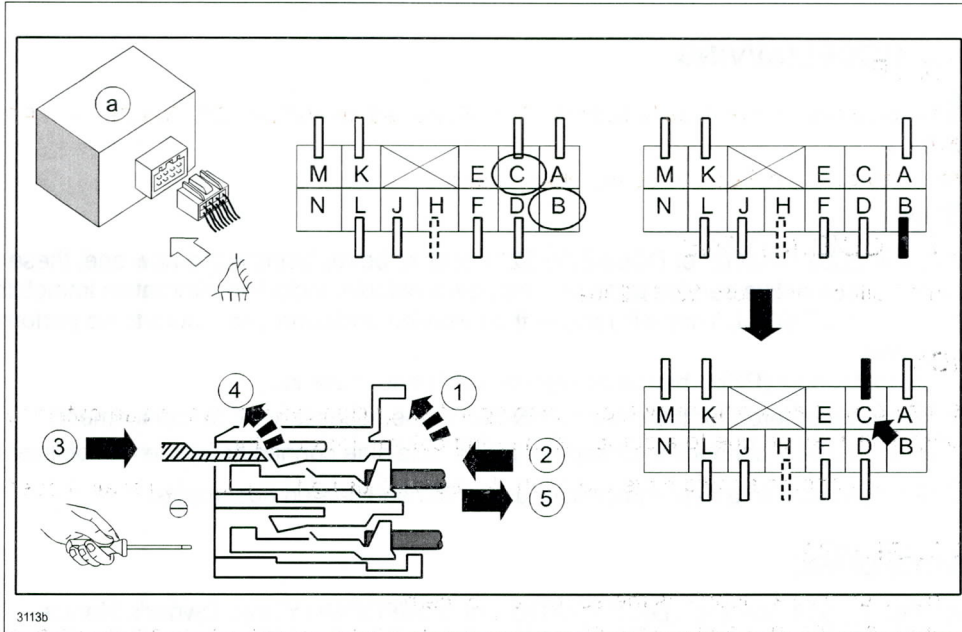

The service parts kit comes with a new immobilizer unit, PCM and related documents.

REPAIR PROCEDURE

1. Replace "a" and "b", and insert "c" (DECLARATION of CONFORMITY) into Owner's Manual.

2. In order to use this kit, it is necessary to change position of a terminal of the immobilizer unit connector (vehicle harness side) on some vehicles. Check "B" and "C" terminals of the immobilizer unit connector (vehicle harness side).
- If "B" is empty and "C" has a terminal, it is OK and no terminal position change is necessary.
 - If "C" is empty and "B" has a terminal, remove "B" terminal and install it in "C" position.

3. Verify repair.

PART(S) INFORMATION

Email the following information to the Dealer Assistance Group at corpdag@mazdausa.com so the appropriate service kit is ordered for the vehicle.

- VIN
- PCM part number
- Vehicle year and model
