

MULTI-MODELS EQUIPPED WITH SCBS ***SMART CITY BRAKE SUPPORT (SCBS) ENGAGES BRAKES WITHOUT OBJECT IN FRONT OF VEHICLE***

Some customers may complain about the Smart City Brake Support (SCBS) brake engagement while driving, even though there is no object in front of the vehicle. Installation of an aftermarket windshield may be the cause.

Inspect the front windshield for a Mazda logo. If no logo is found on the glass, ask the customer if the windshield has been replaced by an aftermarket glass company.

An aftermarket windshield may not include the i-ACTIVSENSE bracket that supports the Forward Sensing Camera and laser sensors. The bracket is part of the windshield and is not intended to be removed. If the bracket is removed and installed on an aftermarket windshield, sensor misalignment may prevent the SCBS from operating properly.

If windshield replacement is necessary on a vehicle equipped with i-ACTIVSENSE technologies, a genuine Mazda windshield is recommended.

To contribute repair tip ideas, send an e-mail to mtips@mazdausa.com or fax to (949) 442-6599. If we select your repair tip, you will receive 10,000 Reward Performance by Mazda (RPM) points for your efforts.
