

SSM 50475 - 2021 Mustang Mach-E - FDRS Showing ABS Software Update Available After A Successful Coordinated Powertrain Control Module (PCM) Software Update

Some 2021 Mustang Mach-E vehicles may show a Ford Diagnosis and Repair System (FDRS) anti-lock brake system (ABS) module software update available after a successful coordinated PCM software update. If the coordinated PCM software update on the PCM, BECM, SOBDMC and ABS completed, the ABS software update app still being present in FDRS can be disregarded. No further programming for this condition is required.
