TECHNICAL OPERATIONS

SUBJECT: LICENSE PLATE(S) AND BRACKET INSTALLATION

This bulletin provides information on the installation of the front and rear license plates on 2022MY~ EV6 (CV) vehicles. These vehicles are supplied with one (1) rear license plate bracket and installation hardware kit for the rear license plate. Follow the procedure outlined in this publication to install the rear bracket and license plates to the vehicle. **Note:** Currently, the front license plate mounting hardware is NOT included.

Hardware Kit Includes: (A) Three (3) short self-tapping screws for the rear bracket; (B) Two (2) long self-tapping license plate screws. **Note:** Two (2) additional long self-tapping screws are required to mount the front license plate (C) to the vehicle.

License Plate Bracket Types:
 1) Light and Wind trims
 2) GT-Line and GT trims

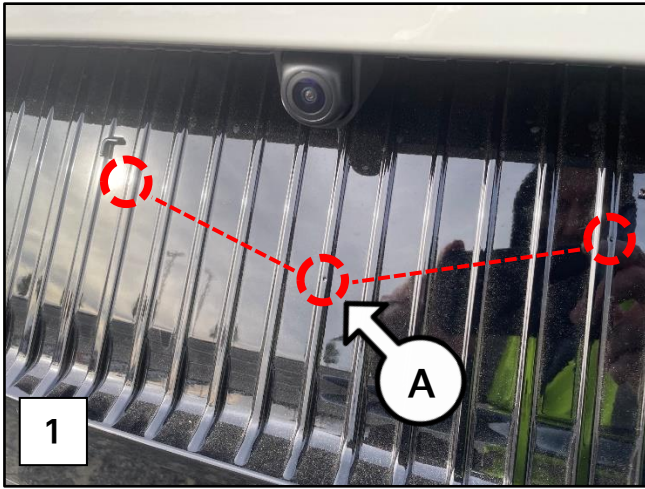

FRONT PLATE INSTALLATION: Install two (2) long self-tapping screws (C) to the front bumper dimple areas shown. DO NOT attempt to use the supplied machine screws included with the kit.

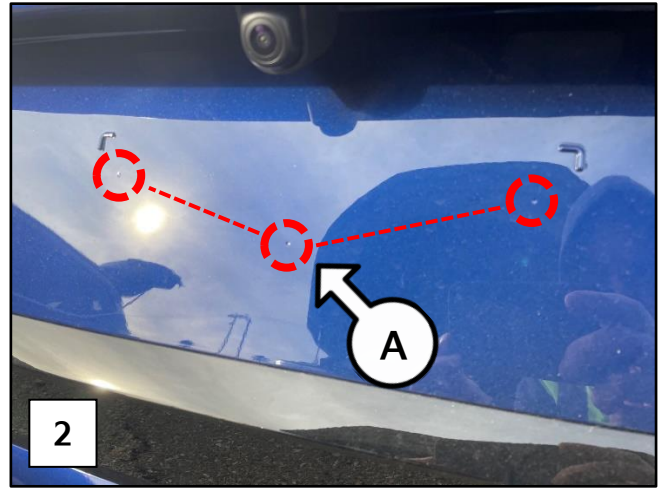

Note: The front license plate screws (C) will need to be sourced locally (non-corrosive).

REAR LICENSE PLATE INSTALLATION:

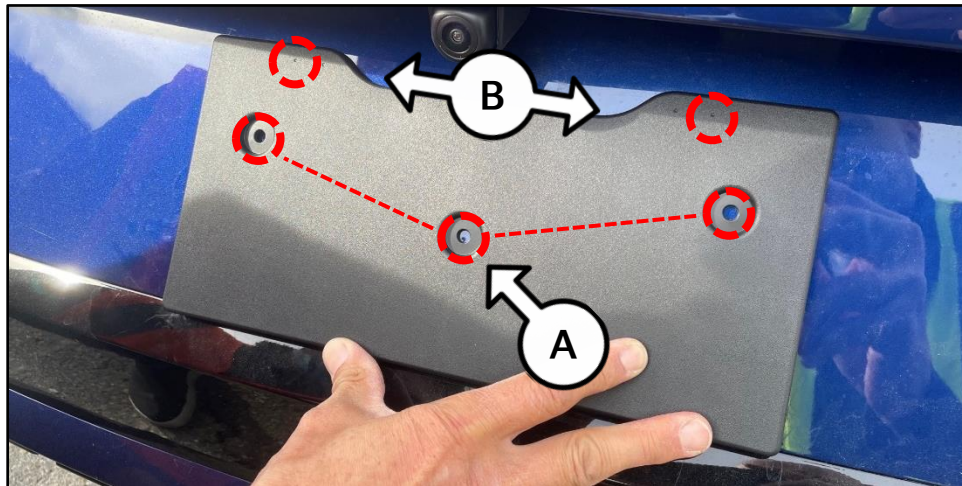

Step 1: Install the three (3) short self-tapping screws (A) to the rear bumper dimple areas shown.

1) Light and Wind trims

2) GT-Line and GT trims

Note: Be sure to align the rear license plate bracket as shown.

Step 2: Install the two (2) long self-tapping screws (B) to the installed bracket as shown above to mount and secure the rear license plate to the vehicle. (not shown).

Note: The long self-tapping screws (B) will tap through the license plate bracket and will also go through the surface area of the rear bumper.
